Custom angled glide plate order measurement sheet

Complete one line per glide plate configuration. See the measuring guide before filling this out.

Measure twice. Custom glide plates are cut to the measurements below and are **non-returnable and non-refundable**. Measure each plate inside bend to inside bend on the underside. Measure the frame inside edge to inside edge of the V-Trough on both sides at the same glide plate location, and record the larger of the two.

Frame measurement	Glide plate width	Thickness 3/16" or 1/4"	Number of bends	Quantity	Driver or passenger side

By signing this, I understand that glide plates outside of the standard size are a non-returnable and non-refundable item, and that the measurements provided are accurate for my site.
