

Project Title: AIO to ASCO Conversion

Product Image:

Project Background:

Why: More reliable valve stack that reduces weeping caused by debris

Who: Project Lead: Zach Kuieck

What: Asco to Angle Body conversion

Where: All 40010 sites

When: Release date Q4. Orderable in washes NOW.

Install Test Site(s): Hudsonville, see appendix A for images

Overview:

The Asco to angle body conversion kit is being launched to reduce weeping caused by debris getting trapped in the Asco valve, therefore reducing water usage and improving reliability. The conversion kit also equips sites to use reclaim underbody. The conversion uses cam and groove adapters for easy attachment and an angle body piston valve to deliver a fully closed valve as well as the plumbing necessary to hook up the underbody blaster to reclaim. This conversion will be utilized by non-Water Treatment Center sites with an all-in-one pump station that experience a large amount of debris.

Criteria:

1. Determine if the site does not have a Water Treatment Center
2. Determine if the site has an all-in-one pump station
3. Determine if the site has Asco valves and wants to upgrade to angle body valves

How to Order:

Order P-SE-2618

Obsolescence:

This conversion does not make any parts obsolete.
